

WEEKLY PROJECT PROGRESS REPORT (WPPR)–

For week commencing 7 March 2026

Programme: BCA (Artificial intelligence, Cloud Computing & Devops)

Student Name: mohammed shan.s

WPPR: 3 Register Number: 23BCAICD066 Internal Guide's Name: Deepthi

MAJOR PROJECT Title:

Design and Development of Natural Language Interface for Agriculture Infrastructure

Targets set for the week:

The targets for this week were to develop the initial user interface of the chatbot using Streamlit and to implement basic input handling. The focus was on creating a simple and interactive chat system where users can enter queries.

Progress/Achievements for the week:

During this week, the chatbot interface was successfully developed using Streamlit. The system was designed in a chat-based format where users can easily type their queries and receive responses. The interface was tested to ensure proper display of messages and smooth interaction.

Basic input handling functionality was implemented, allowing the system to accept and process user inputs effectively. Initial testing was performed to verify that the system correctly captures and displays user messages. This stage marked the transition from planning to actual implementation, and the system became partially functional.

02-05-2026

Future Work Plans:

In the next phase, the focus will be on implementing the core logic of the chatbot by developing the intent detection mechanism. This includes analyzing user input and categorizing it based on keywords and patterns. The query processing module will also be developed to route requests to the appropriate function. Additional improvements will be made to enhance response accuracy and system performance.
