

WEEKLY PROJECT PROGRESS REPORT (WPPR)–

For week commencing 7 March 2026

Programme: BCA (Artificial intelligence, Cloud Computing & Devops)

Student Name: mohammed shan.s

WPPR: 4      Register Number: 23BCAICD066 Internal Guide's Name: Deepthi

MAJOR PROJECT Title:

Design and Development of Natural Language Interface for Agriculture Infrastructure

Targets set for the week:

The targets for this week were to implement the core logic of the system by developing the query processing mechanism. This included creating an intent detection system to identify user requests and route them to the appropriate functionality.

Progress/Achievements for the week:

During this week, the query processing module was successfully implemented, which acts as the core component of the system. The system was able to analyze user input and identify intent using keyword-based matching. Based on the detected intent, queries were routed to the appropriate function.

Different types of queries such as crop information, fertilizer advice, and general questions were handled effectively. The response generation process was improved to provide more meaningful outputs. Testing was conducted to ensure that the system correctly identifies user intent and responds appropriately. This significantly enhanced the functionality of the chatbot.

09-05-2026

Future Work Plans:

In the upcoming week, the focus will be on implementing the fertilizer recommendation feature by integrating crop-related data into the system. This includes adding nutrient values and applying calculation formulas. Additional effort will be made to improve response clarity and ensure meaningful outputs. Testing of individual modules will also be performed.
