

WEEKLY PROJECT PROGRESS REPORT (WPPR)–

For week commencing 7 March 2026

Programme: BCA (Artificial intelligence, Cloud Computing & Devops)

Student Name: mohammed shan.s

WPPR: 2 Register Number: 23BCAICD066 Internal Guide's Name: Deepthi

MAJOR PROJECT Title:

Design and Development of Natural Language Interface for Agriculture Infrastructure

Targets set for the week:

The targets for this week were to design the overall system architecture and define the structure of the project. This included identifying the main modules such as user interface, query processor, and knowledge base. The plan also involved preparing the High-Level Design (HLD) document and establishing the workflow of the system.

Progress/Achievements for the week:

During this week, the system architecture was successfully designed by analyzing how different components interact within the system. The major modules such as the user interface, query processor, knowledge base, and control flow were clearly identified and structured. This helped in understanding the internal working of the system.

The High-Level Design document was prepared with detailed explanations of system flow, module responsibilities, and interaction between components. The workflow of the chatbot was clearly defined from user input to response generation. This step provided a solid foundation for the development phase and ensured clarity in implementation.

24-04-2026

Future Work Plans:

In the upcoming week, the focus will shift towards developing the chatbot interface using Streamlit. The plan includes creating a responsive chat interface that allows users to interact easily with the system. Basic input handling mechanisms will be implemented to capture and process user queries. Additional attention will be given to improving the visual layout and ensuring a simple and user-friendly design.
